

Autoliv Environmental Policy

The purpose of this Policy is to define Autoliv's commitments regarding environmental protection. Autoliv is committed to minimizing the negative environmental impacts in our own operations and supply chain as well as realizing the potential of sustainable mobility through supporting our customers.

This Environmental Policy applies to all parts of Autoliv's operations. Management is responsible for adherence to this policy and all employees share the responsibility for ensuring that the commitments are met. Autoliv's Supplier Code of Conduct and Supplier Sustainability Guidelines contain further expectations and requirements when it comes to Autoliv's suppliers and partners.

To meet its environmental commitments, Autoliv:

1. Complies with relevant environmental legislation and regulations wherever Autoliv operates.
2. Applies a structured management approach based on continuous improvement, considering the specific nature of business conducted, and associated environmental impacts. Related principles and processes are aligned with internationally recognized environmental management system standards.
3. Sets evidence-based targets for key environmental impacts. In the area of climate, Autoliv sets corporate targets approved by the Science Based Targets initiative (SBTi).
4. Reports in a transparent and timely manner on its environmental impacts, risks, and opportunities, in line with internationally recognized reporting frameworks.
5. Continuously assesses and implements measures to manage its climate-related risks and opportunities.
6. Applies a broad range of solutions to reduce its climate footprint with emphasis on increasing the use of renewable energy through verifiable energy instruments. Autoliv considers carbon offsetting the last step of reducing its climate footprint.
7. Strives for continuous improvement of resource efficiency, with particular emphasis on energy, raw materials, and water.
8. Continuously takes measures related to responsible waste management and pollution prevention, in particular related to air, soil, and water quality.
9. Takes measures towards sustainable use of water resources and the protection of ecosystems and biodiversity, including related to deforestation.
10. Applies key principles of circularity and sustainable design to reduce life-cycle environmental impacts.
11. Applies the precautionary principle where relevant, including related to potentially harmful substances and substances of concern.
12. Engages in continuous training of employees on relevant environmental topics, and knowledge sharing with relevant stakeholders to promote environmental responsibility.
