

COMMERCIAL VEHICLE SAFETY

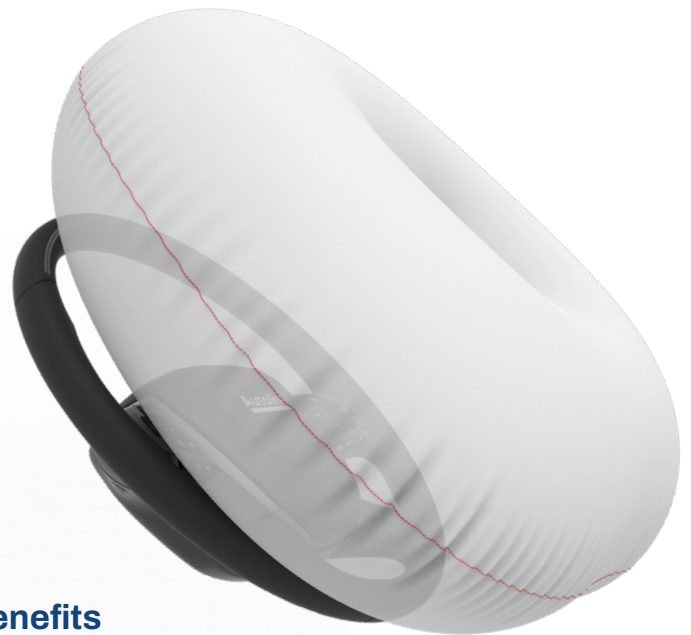

DRIVER AIRBAG

Autoliv offers driver units that include a complete steering wheel and an airbag or non-airbag unit, with both standardized and tailor-made designs to meet the unique needs of each vehicle.

Driver airbags provide an energy-absorbing cushion in frontal impacts, positioned between the driver and the steering wheel, instrument panel, and windshield. When deployed, they protect the driver's head and upper body. Each year, a significant number of commercial drivers are at risk of injury and death, making these safety features crucial.

Key Features

- 400mm - 500mm diameter sizes
- Magnesium, steel and hybrid armatures
- Managing the energy on the driver and passenger during collisions and rollovers
- Frontal impact protection

Benefits

- Proven injury reduction
- Autoliv core technology utilized
- Energy management can be tuned with seatbelts
- Better coupling to the occupant during collisions
- Leveraging steering wheel and airbag technology expertise combined
